PRODUCT: **Jazz Supreme Polishers**

Prep, etch, bond, fill, finish, and polish. You know—all that jazz! Anyway, that last step just got easier with the new polishing series Jazz Supreme Polishers. SS White Burs, Inc., who previously brought us the minimally invasive, conservative Fissurotomy bur and the Great White Ultra Carbide series, now offers a selection of conventional and diamond-impregnated composite and ceramic polishing sets. The Jazz Supreme Polishers lead off this series of polishers.

Jazz Supreme Polishers are single-step, universal diamond composite polishers that provide an ultra-high shine for any type of composite material. Designed to polish all types of composites—including nanofilled, microfilled, hybrid, or even flowable—the Jazz Supreme Polishers eliminate the usual two to three steps, allowing you to create a beautiful shine with a unique and efficient one-step system. You no longer have to waste time changing grits since the degree of polish you can achieve is determined by speed and pressure. This unique capability is accomplished with a special proprietary formula that combines diamond particles infused with a unique binder material.

Jazz Supreme Polishers will save you valuable chair-time and reduce your overhead. You will no longer have to wonder what grit to stock, what to use, or when to use it.
